

Casey Architectural Lighting transforms the designers vision into reality.

As one enters the lobby of the Phoenix Airport Hotel, your eye is drawn to the disk in the center of the room, illuminating the suspended, champaign colored acrylic stars, mimicking the Arizona night sky.

In the event room, the fan pattern of suspended, linear LED fixtures keep the audience cool from the desert heat outside.

ADA compliant wall mount units provide a soft glow at entry ways and on the pool deck. Hidden downlighting at the bottom of the fixture provides supplemental lighting for safety.

Glowing cylinders are column mounted on the walls of the property to compliment the wall mount units.

Whether a large or small project, we can meet your custom lighting needs.

No matter the venue you are lighting, the creative design team at Casey Architectural Lighting is there to assist. Whether you have a design concept in mind or you need creative assistance in developing an attractive design element for your project, our creative team is there for you.

The process first begins with meeting the illumination requirements to ensure that the lighting is not just a design element, but also effectively meeting your lighting needs.

Once the illumination specifications are met we then turn our full creative design talents to making the lighting fit seamlessly into your project.

Scale, aesthetics, finishes, quality in workmanship, ease of installation and maintenance, and safety are all given stringent consideration on our way to the final design.

Delivery and installation of the final product is always exciting, as the culmination of concept, design, fabrication, finishing, assembly, testing, and installation all come together to complete your vision.

Some projects have such unique and complex requirements that we send some of our lighting experts on site to advise and assist with any field assembly and installation. While not every project will require this, rest assured that we provide whatever level of support is needed to complete your project.
